

SASMOS HET Technologies has been chosen to receive the 2nd Prize in “Excellence in Indigenization” in MSME category of ELCINA Defenovation Awards 2018.

The project required a localization of defence aircraft panels. The objective was to deliver cost effective solution with greater focus on Indianization and quality across strategic programs. The company established a dedicated production floor with clean environment, quality delivery and engaged with 60+ global vendor eco-system with stringent evaluation criteria. Further qualified local vendors were identified and more than 10 vendors were involved actively and the company achieved almost 45-50% Indian content across programs with 90% + localization of mechanical parts of panels.

Consistent improvement in delivery & quality – Awarded best supplier, pro-active solutions for continuous cost reduction & increase in localization. For this success SASMOS invested in development of WIP tester, Portable panel tester, alternative local part for expensive parts that were being imported.

The company has proved itself as a pro-active solution provider for cost reduction and increased localization, a credible offset partner for critical areas of wiring harness, panels and integration systems resulting in upwards of 15% cost savings.

ELCINA congratulates SASMOS HET TEHCNOLOGIES on this achievement and wishes them even more laurels in the days to come.
